Dear editor

We thank Mr. Colombo for their interest in our manuscript. In this project, we opted to treat the pre- and post-education surveys as independent samples because we could not ascertain how many post-survey questions were answered by patients alone, without the involvement or help from their caregivers. The overall objective of this quality improvement project was to disseminate information about delirium to older adults, which we feel was achieved in the study. We appreciate and agree with their comments. Thank you very much for taking an interest in our manuscript.

Publish your work in this journal

Clinical Interventions in Aging is an international, peer-reviewed journal focusing on evidence-based reports on the value or lack thereof of treatments intended to prevent or delay the onset of maladaptive correlates of aging in human beings. This journal is indexed on PubMed Central, MedLine, CAS, Scopus and the Elsevier Bibliographic databases. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use.
