Dear editor

We appreciate the opportunity to respond to the letter written to the editor in chief on our article titled. Bacterial and Fungal Profile, Antibiotic Susceptibility Patterns of Bacterial Pathogens and Associated Risk Factors of Urinary Tract Infection Among Symptomatic Pediatrics Patients Attending St. Paul's Hospital Millennium Medical College: A Cross-Sectional Study. We also thank the Kumar et al for taking the time to read our article and for their interest in contributing to it.

Response #1: In this article, we used the terms ward acquired urinary tract infection(UTI) and intensive care unit (ICU) acquired urinary tract infection(UTI) and operationalized them. We have operationally defined ward-acquired UTI as UTI acquired outside of ICU settings. Whereas we defined Intensive care unit (ICU)-acquired UTI as UTI acquired in an ICU setting. We have also seen ward-acquired and ICU-acquired terms in scientific literature. For example, it has been used in the following scientific studies.¹⁻⁴

Response #2: Kirby-Bauer disk diffusion method is not recommended for testing vancomycin against *Staphylococcus aureus*. We used E-test for testing vancomycin against *Staphylococcus* spp.⁵

Response #3: For most *Staphylococcus* spp including *Staphylococcus aureus* oxacillin susceptibility is screened by cefoxitin (30µg) disk as a surrogate agent as per CLSI M100 guidelines. Hence, we used cefoxitin disk for screening oxacillin susceptibility among *Staphylococcus aureus* and coagulase-negative *Staphylococcus*. The susceptibility results of cefoxitin are shown in Table 5.⁵

Response #4: Oxacillin is not recommended for *Enterococcus* spp. Oxacillin was not tested and reported for *Enterococcus* spp. in our article. Table 5 has no cefoxitin susceptibility result for *Enterococcus* spp.⁵

Infection and Drug Resistance

Dovepress

Publish your work in this journal

Infection and Drug Resistance is an international, peer-reviewed open-access journal that focuses on the optimal treatment of infection (bacterial, fungal and viral) and the development and institution of preventive strategies to minimize the development and spread of resistance. The journal is specifically concerned with the epidemiology of antibiotic resistance and the mechanisms of resistance development and diffusion in both hospitals and the community. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
