

A Multicenter 12-Month Retrospective Evaluation of Canaloplasty and Trabeculotomy in Patients with Open-Angle Glaucoma: The ROMEO 2 Study [Corrigendum]

Murphy III JT, Terveen DC, Aminlari AE, Dhamdhare K, Dickerson Jr JE. *Clin Ophthalmol.* 2022;16:3043–3052

On page 3043, the second sentence of the Introduction, “The study was the basis of the FDA approved OSS indication to “reduce IOP in adult patients with open-angle glaucoma.”” should read “The study was the basis of the FDA cleared OSS indication to “reduce IOP in adult patients with primary open-angle glaucoma.””

The authors apologize for this error and advise it does not affect the results of the paper.

Publish your work in this journal

Clinical Ophthalmology is an international, peer-reviewed journal covering all subspecialties within ophthalmology. Key topics include: Optometry; Visual science; Pharmacology and drug therapy in eye diseases; Basic Sciences; Primary and Secondary eye care; Patient Safety and Quality of Care Improvements. This journal is indexed on PubMed Central and CAS, and is the official journal of The Society of Clinical Ophthalmology (SCO). The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
